

Decision Tree - Buy Computer

1. Calculate entropy of the target:

$$\begin{aligned} \text{Entropy (Buys-computer)} &= \text{Entropy}(12, 8) = \text{Entropy}(0,6, 0,4) \\ &= -(0,6 \log_2 0,6) - (0,4 \log_2 0,4) \\ &\approx 0,97 \end{aligned}$$

2. Calculate Entropy for each branch (t and then the gain)

Column Credit Rating:
 10 Fair $\begin{cases} \text{yes } 7 \\ \text{no } 3 \end{cases}$
 10 Excellent $\begin{cases} \text{yes } 5 \\ \text{no } 5 \end{cases}$

$$\begin{aligned} \rightarrow \text{Entropy (Credit-Rating, Fair)} &= \text{Entropy}(7, 3) = \text{Entropy}(0,7, 0,3) = -(0,7 \log_2 0,7) - (0,3 \log_2 0,3) \approx 0,88 \\ \text{Entropy (Credit-Rating, Excellent)} &= \text{Entropy}(5, 5) = \text{Entropy}(0,5, 0,5) = -(0,5 \log_2 0,5) - (0,5 \log_2 0,5) = 1 \end{aligned}$$

$$\begin{aligned} \hookrightarrow \text{Gain (Buys-computer, Credit-rating)} &= 0,97 - \frac{10}{20} \cdot 0,88 - \frac{10}{20} \cdot 1 = 0,03 \end{aligned}$$

Column Student:
 9 yes $\begin{cases} \text{yes } 8 \\ \text{no } 1 \end{cases}$
 11 no $\begin{cases} \text{yes } 7 \\ \text{no } 4 \end{cases}$

$$\begin{aligned} \rightarrow \text{Entropy (Student, Yes)} &= \text{Entropy}(8, 1) = \text{Entropy}(0,88, 0,11) \\ &= -(0,88 \log_2 0,88) - (0,11 \log_2 0,11) \approx 0,51 \end{aligned}$$

$$\begin{aligned} \text{Entropy (Student, No)} &= \text{Entropy}(7, 4) = \text{Entropy}(0,64, 0,36) \\ &= -(0,64 \log_2 0,64) - (0,36 \log_2 0,36) \approx 0,94 \end{aligned}$$

$$\begin{aligned} \hookrightarrow \text{Gain (Buys-computer, Student)} &= 0,97 - \frac{9}{20} \cdot 0,51 - \frac{11}{20} \cdot 0,94 \\ &\approx 0,22 \end{aligned}$$

Column Income:
 5 high $\begin{cases} \text{yes } 3 \\ \text{no } 2 \end{cases}$
 8 medium $\begin{cases} \text{yes } 5 \\ \text{no } 3 \end{cases}$
 7 low $\begin{cases} \text{yes } 4 \\ \text{no } 3 \end{cases}$

$$\begin{aligned} \rightarrow \text{Entropy (Income, High)} &= \text{Entropy}(3, 2) = \text{Entropy}(0,6, 0,4) \\ &\approx 0,97 \end{aligned}$$

$$\begin{aligned} \text{Entropy (Income, Medium)} &= \text{Entropy}(5, 3) = \text{Entropy}(0,625, 0,375) \\ &= -(0,625 \log_2 0,625) - (0,375 \log_2 0,375) \\ &\approx 0,95 \end{aligned}$$

$$\begin{aligned} \text{Entropy (Income, Low)} &= \text{Entropy}(4, 3) = \text{Entropy}(0,57, 0,43) \\ &= 0,99 \end{aligned}$$

$$\begin{aligned} \hookrightarrow \text{Gain (Buys-computer, Income)} &= 0,97 - \frac{5}{20} \cdot 0,97 - \frac{8}{20} \cdot 0,95 - \frac{7}{20} \cdot 0,99 \\ &= 0,001 \end{aligned}$$

Column Age:
 8 ≤ 30 $\begin{cases} \text{yes } 6 \\ \text{no } 2 \end{cases}$
 6 31...40 $\begin{cases} \text{yes } 6 \\ \text{no } 0 \end{cases}$
 6 > 40 $\begin{cases} \text{yes } 4 \\ \text{no } 2 \end{cases}$

$$\begin{aligned} \rightarrow \text{Entropy (Age, } \leq 30) &= \text{Entropy}(2, 6) = \text{Entropy}(0,25, 0,75) \\ &= 0,188 \end{aligned}$$

$$\rightarrow \text{Entropy (Age, 31...40)} = \text{Entropy}(6, 0) = 0 //$$

$$\rightarrow \text{Entropy}(\text{Age}, >40) = \text{Entropy}(4, 2) = \text{Entropy}(0,67, 0,33) \approx 0,92$$

$$\hookrightarrow \text{Gain}(\text{Buy} - \text{Computer}, \text{Age}) = 0,97 - \frac{8}{20} \cdot 0,188 - \frac{6}{20} \cdot 0 - \frac{6}{20} \cdot 0,92 = 0,6188$$

\hookrightarrow Überblick:

Gain (Credit-rating) : 0,03 Gain (Income) : 0,001
 Gain (Student) : 0,22 Gain (Age) : 0,6188
 Gain (REC) : nicht betrachtet, da 20 untersch. Werte

\hookrightarrow Age hat den höchsten Gain

\hookrightarrow erste Ebene:

3. Iterativ weiter für jeden Branch:

• ≤ 30 Branch: Target Entropy hier: 0,188

Column Student: $\begin{matrix} 2 \text{ yes} & - & \text{yes} & 2 \\ 6 \text{ no} & - & \text{no} & 0 \\ & - & \text{yes} & 0 \\ & - & \text{no} & 6 \end{matrix}$

Entropy =
H

$$\text{Entropy}(\text{Student}, \text{yes}) = H(2, 0) = H(1, 0) = 0 \rightarrow \text{leaf}$$

$$\text{Entropy}(\text{Student}, \text{no}) = H(0, 6) = H(0, 1) = 0 \rightarrow \text{leaf}$$

\hookrightarrow da 2 leaf direkt expandieren:

• >40 Branch: Entropy hier: 0,92

Column Student: $\begin{matrix} 4 \text{ yes} & - & \text{yes} & 3 \\ & - & \text{no} & 1 \\ 2 \text{ no} & - & \text{yes} & 1 \\ & - & \text{no} & 1 \end{matrix}$

$$\text{Entropy}(\text{Student}, \text{yes}) = H(3, 1) = H(0,75, 0,25) \approx 0,81$$

$$\text{Entropy}(\text{Student}, \text{No}) = H(1, 1) = H(0,5, 0,5) = 1$$

$$\text{Gain}(\text{Student}) = 0,92 - \frac{4}{6} \cdot 0,81 - \frac{2}{6} \cdot 1 \approx 0,047$$

Column Credit rating: $\begin{matrix} 3 \text{ Fair} & - & \text{yes} & 3 \\ 3 \text{ Excellent} & - & \text{no} & 0 \\ & - & & 1 \\ & - & & 2 \end{matrix}$

$$\text{Entropy}(\text{Credit-rating}, \text{Fair}) = H(3, 0) = 0 \rightarrow \text{leaf}$$

$$\text{Entropy}(\text{Credit-rating}, \text{Excellent}) = H(1, 2) = H(0,33, 0,67) \approx 0,96 \quad (2)$$

Column Income

- 0 High
- 4 Medium
- 2 Low

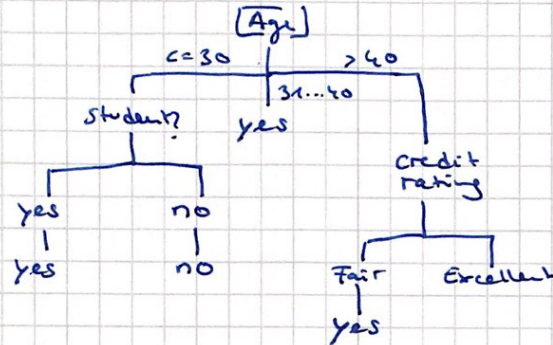

yes 3
no 1
yes 1
no 1

$$\text{Entropy}(\text{Income}, \text{Medium}) = H(3, 1) = H(0,75, 0,25) \approx 0,81$$

$$\text{Entropy}(\text{Income}, \text{Low}) = H(1, 1) = H(0,5, 0,5) = 1$$

$$\text{Gain}(\text{Income}) = 0,92 - \frac{4}{6} \cdot 0,81 - \frac{2}{6} \cdot 1 \approx 0,047$$

↳ Highest Gain: Credit - ranking:

4. Letzter Branch: > 40 & credit rating Excellent:

Entropy(Income)

- high 2
- medium 2
- low 1

yes - 1
no - 1
no - 1

Entropy(Student)

- yes 2
- no 1

yes - 1
no - 1
yes - 0
no - 0
